

In-Class Exercises #2

The zip file of `Files4Lab2.zip` contains four java files.

1. Within your package `Codes**2800`, create four files in the same names as the provided files, except that `XY` needs to be replaced by your initials.
 - The scene graph for the provided code is shown in the left figure below.
 - Running your program should produce a result as shown in Fig.(a), which has menu items to pause/resume the rotation and to switch between a big and small star. In addition, the frame title updates according to the selected menu items.
2. Modify your files to produce the result as shown in Fig.(b).
 - (a) Keep the functionality of menu items `Exit` and `Pause/Resume`, but change the shape from star to circle.
 - (b) The program starts by displaying a white circle, which has a radius of 0.6 and is approximated by 60 line segments.
 - (c) When the menu item `Circle` is selected, a smaller circle in a color of your choice shows up inside the big circle. The smaller circle has a radius of 0.5 and is still approximated by 60 line segments.
 - (d) The selection of menu item `Circle` makes the display switching between one circle and two circles, and the frame title always indicates the number of circles in display.
 - (e) Make your program easy to comprehend by adding adequate amount of comments.
3. Locate the folder that contains all files of your project `Comp2800`; produce a zip file of your project folder; and submit it online before due.
