

In-Class Exercises #6

The zip file of Files4Lab6.zip contains one java file.

1. Within package `Codes**8490`, create one file in the same name as the provided file and replace XY with your initials.
 - The provided code follows a scene graph as shown in the left figure below.
 - Running your program should produce a disk shape as shown in Fig.(a), which consists of the ring-shaped side surface and one moving circular surface, with the other circular surface missing.
 - There is no change to the rendering result when menu item **Textured Disk** is selected.
2. Modify your file(s) to produce the result as described below.
 - (a) The program starts with all the three sides of the disk. While the side surface remains stationary in relation to the circular surfaces, the two circular surfaces move in opposite directions to close and open the gaps in the same way as in the provided code.
 - (b) A selection of menu item **Textured Disk**, as shown in Fig.(b), results a pause of the top (circular) surface, a pause of the bottom surface, the resume of the top surface, and the resume of the bottom surface to their movements in the specific order.
 - (c) In addition, a selection of menu item **Textured Disk** results in an update of the frame title to indicate the corresponding actions.
 - (d) Make your program easy to comprehend by adding adequate amount of comments.
3. Locate the folder that contains all files of your project `Comp8490`; produce a zip file of your project folder; and submit it online before due.
