

COMP-8490 RESEARCH REPORT TEMPLATE

- **TITLE**

The title usually follows the pattern as “the proposed method” for “a targeted problem”.

- **COVER PAGE**

The cover page includes report title, name of the student, affiliation, date of report submission. At the bottom of the cover page is a statement, “This report is completely my own work, signed by your name”, followed by your signature.

- **ABSTRACT**

The abstract gives an overall description of the report.

- **TABLE OF CONTENTS**

This table lists the contents of the report.

1. INTRODUCTION

This chapter introduces the research area in general, the research subject in particular, the proposed method/technique for a particular problem, and overall structure of the report.

2. SURVEY OF THE RESEARCH SUBJECT

The survey lays the foundation of the research. It can be several chapters when a research subject is related to issues of multiple disciplines. Each chapter presents the investigation of known problems related to the research subject, methods/techniques that exist to deal with related problems, and an analysis of the strengths, limitations, and relationship among existing methods/techniques. With efficient support of tables and graphs, the writing of the report needs to exhibit proper use of expressions and be free of spelling and grammar errors.

3. PROPOSED METHOD

This chapter presents the proposed method/technique. It contains mainly two parts: proposed method and proof-of-concept. While the former needs to provide enough details to understand the operation and to evaluate the viability of the proposed method/technique, the latter needs either to explain how the proof-of-concept will be done without actually doing it for scientific research or to actually produce a working system for technical investigation. Sufficient information needs to be provided for another student to redo the work.

4. DISCUSSIONS AND CONCLUSIONS

This chapter summarizes the results of the investigation, provides conclusions, and points out directions for further research.

5. BIBLIOGRAPHY

The bibliography needs to provide 10-20 cited references with complete information of publication and in a common referencing style such as the IEEE standards described in Section II of [Information for Author](#).

6. APPENDIX

The Appendix includes the materials that are not suitable to put in the main body of the report.
